

UNISWAP HOOK INCUBATOR • HOOKATHON

SUBMISSION FIELD GUIDE

Hookathon

Guidelines & Process

PRIZE POOL

\$15,000

TEAM SIZE

Up to 4 devs

FORMAT

10-slide field guide

AUDIENCE

UHI10 cohort builders

- PROGRAM OVERVIEW

Three weeks to build. One Demo Day to prove it.

In the last three weeks of the incubator, you apply everything from the first six weeks into a real hook. Across the first nine cohorts, 400+ developers have shipped 660+ hooks and won \$130,000+ in prizes — with alumni going on to raise millions in funding.

// YOUR MISSION

01

Build a custom hook from your own idea, or get inspired by the Request for Hooks page.

02

Hack solo or in a team of up to 4 — solo devs, duos, and full teams have all won before.

03

Submit one hook project per developer/team for Final Submission (multiple ideas are fine at the idea stage).

04

Present at a live Demo Day to a panel of investors, researchers, and builders.

● STEP 1 OF 2

Find your idea. Find your team.

Some things to do before you write a line of code.

01 Post your hook idea in #hook-ideas — get feedback, or find collaborators.

02 Find teammates in #form-a-team (working solo is fine too).

03 Submit your Hookathon Project Idea by August 17th via the intake form.

04 Stuck on an idea? Skim Discord and the Request for Hooks page for inspiration.

● STEP 2 OF 2

Two check-ins. One final submission.

// PROGRESS UPDATES

WEEK 1

Submit the Progress Update 1 form by August 24th.

WEEK 2

Submit the Progress Update 2 form by August 31st.

Use the Project ID from your submission email (HK-UH110-####). Only one teammate needs to submit each update.

// FINAL SUBMISSION

01

Submit through the Final Hookathon Submission form before the **DEADLINE ON SEPTEMBER 3RD BY 11:59pm PST.**

02

Your project then appears in the Hooks Directory at hooks.atrium.academy.

03

Need to edit project details after submitting? Email team@atrium.academy for access.

- JUDGING · GATE 1

Miss any of these seven, and it isn't judged.

Public GitHub Repo ✓

Repo must be public (private repos need pre-clearance).

Demo/Explainer Video ✓

≤5 min, no AI voices — or it isn't reviewed.

Valid Hook ✓

A real Uniswap v4 hook, or a direct interface to one.

Written & Workable Code ✓

Some code must be newly written during the Hookathon.

README with Partner Integrations ✓

List them, or state “No partner integrations.”

New Code for Returning Teams ✓

Previously judged code doesn't count again.

Originality ✓

No copied code from workshops, curriculum, or past projects, unless credited.

Tests OR a Functioning Frontend ✓

A front-end is not required — but skip making one and you need enough test cases for judges to verify functionality. **No tests and no front-end means no prize judging.**

• JUDGING • GATE 2

Five criteria. One weighted score.

Scored 0–5 per category (0 = Poor/Not at all, 5 = Exceptional), then weighted into a final score.

30%

Original Idea

Novelty of the concept itself
— is the idea new to
Uniswap or DeFi?

25%

Unique Execution

Distinctiveness of how it's
built: architecture,
integrations, UX.

20%

Impact

Potential value to users, the
Uniswap ecosystem, or
DeFi.

15%

Functionality

How well the hook works as
outlined; robustness and
completeness.

10%

Presentation Pitch

Clarity and quality of the
video explanation/demo.

● SUBMISSION

What judges need in hand.

// CHECKLIST

01 Link to your GitHub repo.

02 Link to a demo video explaining your project.

03 Either test cases, or a working frontend for judges to interact with.

See the Sponsor Hooks page for individual partner criteria and ideas.

PRIZE POOL

\$15,000+

- Sponsored by Uniswap Foundation and Atrium Academy.
- Split across multiple winning projects — more devs have a real shot.

- GOTCHAS

Five details that trip people up.

01 Submission Type — select “Uniswap Hook Incubator (UHI).”

02 Cohort field — current devs list their current cohort; alumni list the cohort they graduated from (never the cohort the hookathon is for).

03 Partner integrations — only select partners you actually built for. Future or planned integrations don't count.

04 Links — include a demo video (≤ 5 min, no AI voices) and your public GitHub repo(s), pointing at the right branch.

05 Testnet deployment isn't mandatory — just ship with unit tests OR a basic frontend that interacts with the hook.

● THE VIDEO

Full creative freedom. Keep it clear.

// COVER THESE

The problem you're solving.

How your hook works.

How it compares to existing solutions (if relevant).

// DO NOT

Go over 5 minutes — judges stop watching after that.

Use AI voices — marks down your score and blocks you from Demo Day.

Most teams use YouTube or Loom — Drive, Dropbox, Vimeo, or a link in your repo all work too, as long as every judge can open it.

HIGH-SCORING EXAMPLES: [Hookupasar](#) • [modl](#) • [Addressing Gas Volatility in DeFi](#) • [ShadowBook Hook](#) • [VolVantage](#) • [MaybeSwap](#) • [ParaDex](#)

- AFTER YOU SHIP

Ship something. Get rewarded.

01

Future Hookathons

Any graduate who submits a capstone hook can join future hookathons. Ship something (anything!) now — come back and build your masterpiece later.

02

NFT Certificate

A personalized certificate highlighting your project name and date of completion.

03

Physical Swag

A sweatshirt or t-shirt, delivered directly to you!

Ship it. Get graded. Get swag.
